

WHAT IS CLAIMED IS:

1. An internal arrangement of a computer case, which clear a space between a second access unit and a motherboard by changing an allocation of a first access unit, comprising:

- 5 a case with a front and a rear panel; and
a plurality of stacked first access units installed in an upper portion close to the rear panel;

wherein the stacked first access units are allocated in the upper portion close to the rear panel of the case allowing air entering the case to flow and deliver heat
10 source to the back of the case, and provide a disk array with more data storage space.

2. The arrangement of Claim 1, wherein the case includes a bottom portion, the front panel and the rear panel adjacent to two opposing sides of the bottom portion, the front and rear panels form a receiving space.

3. The arrangement of Claim 2, further comprising a motherboard disposed
15 within the receiving space over the bottom portion.

4. The arrangement of Claim 2, further comprising a second access unit under the first access unit within the receiving space.

5. The arrangement of Claim 4, wherein the second access unit includes a 3.5" floppy disk or a compact disk.

20 6. The arrangement of Claim 2, further comprising a plurality of connectors with various pins, a heat dissipation device and a power supply installed on the rear panel.

7. The arrangement of Claim 2, further comprising a pair of support members extending between the front and rear panels, wherein the support members
25 form a space for receiving the first access unit therein.

8. The arrangement of Claim 1, wherein the first access unit includes a box member and a hard disk disposed in the box member.

9. The arrangement of Claim 8, wherein the box member includes a plurality of connection members formed along a periphery thereof to be fitted with the support members.

10. The arrangement of Claim 8, wherein the box member includes a
5 terminal at one end thereof.
